**Specimen Required:**

Patient Prep: This test requires the pediatric patient (3-17 years old) to fast for 1 hour prior to test administration. The patient should not have taken antibiotics, proton pump inhibitors (e.g., Prilosec, Prevacid, Aciphex, Nexium), or bismuth preparations (e.g., Pepto-Bismol) within the previous 14 days. The effect of histamine 2-receptor antagonists (e.g., Axid, Pepcid, Tagamet, Zantac) may reduce urease activity on urea breath tests and should be discontinued for 24-48 hours before the sample is collected. When used to monitor treatment, the test should be performed four weeks after cessation of definitive therapy. The patient should be informed that the Pranactin-Citric drink that will be administered contains phenylalanine. Phenylketonurics restrict dietary phenylalanine.

Collect: BreathTek UBT Kit. (ARUP Supply #51124) available online through eSupply using ARUP Connect™ or contact ARUP Client Services at (800) 522-2787.

Specimen Preparation: 1) Label breath collection bags with patient name, MRN, date and time of collection, and indicate Pre (blue) or Post (pink).
2) Collect the baseline (Pre) breath specimen according to the instructions in the BreathTek UBT kit.
3) After the allotted time, collect the Post breath specimen according to the instructions in the kit.

Remarks: Submit with Order: Weight (in pounds), height (in inches), sex, and age.

Unacceptable Conditions: Underinflated bags. Specimens from patients younger than 3 years.

Stability (collection to initiation of testing): Ambient: 1 week; Refrigerated: Unacceptable; Frozen: Unacceptable.
