

Quarterly HOTLINE: Effective **May 21, 2018**

**0099564**      ***Strongyloides* Antibody, IgG by ELISA, Serum**

**STRONGY**

**Performed:**      **Sun-Sat**  
**Reported:**      **1-3 days**

**Reference Interval:**  
**Effective May 21, 2018**

0.99 IV or less	Negative - No significant level of <i>Strongyloides</i> IgG antibody detected. Recommend repeat testing in 10-14 days if clinically indicated.
1.00 IV or greater	Positive - IgG antibodies to <i>Strongyloides</i> detected, which may suggest current or past infection.

**Interpretive Data:** False-positive results may occur with prior exposure to other helminth infections. Testing low-prevalence populations may also result in false-positive results.
