

Patient: [REDACTED]
 DOB: [REDACTED] Age: [REDACTED] Gender: [REDACTED]
 Patient Identifiers: [REDACTED]
 Visit Number (FIN): [REDACTED]

Client: [REDACTED]
 Physician: [REDACTED]

ARUP Test Code: 0060182
 Collection Date: 11/08/2016
 Received in lab: 11/24/2016
 Completion Date: 12/02/2016

Results and Interpretation

Clinical Information: Three isolates of Staphylococcus epidermidis.

Lane	Isolate
1	lambda phage size marker ladder (48.5 kb concatemers)
2	Control
3	16STOMC3130003 (10169460) 11/8/16
4	16STOMC3130004 (10169461) 11/8/16
5	16SMH322MI0155 (10223130) 11/17/16

RESULTS: Genomic analysis was performed by pulsed-field gel electrophoresis following restriction digest using SmaI.

The isolates tested differ by ≥ 7 bands. See attached photograph.

It is recommended that the results of strain characterization of epidemiologically associated bacteria be interpreted by an investigator familiar with the outbreak investigation and knowledgeable about the limitations of typing procedures. There are currently no standardized guidelines for pulsed-field gel electrophoresis band pattern interpretation.

The following non-standardized guidelines may be used to assist in report interpretation:

Category	Band Differences	Epidemiological Interpretation
Indistinguishable	0	Part of the outbreak
Closely related	2-3	Probably part of the outbreak
Possibly related	4-6	Possibly part of the outbreak
Different	≥ 7	Not part of the outbreak

Test developed and characteristics determined by ARUP Laboratories. See Compliance Statement B: www.aruplab.com/CS
