Comments:

This test does not screen for neural tube defect because of the early gestation.

Assuming the patient information listed is correct, this maternal screen is ABNORMAL. Other outcomes of abnormal screens include: normal pregnancy, over-estimated gestational age, and intra-uterine fetal demise or missed abortion. If you have questions regarding this screen, please call Genetics at 800-242-2787 ext. 2020.

The First Trimester Screen is a screening test for Down syndrome and Trisomy 18. It will not detect all cases of these disorders and its ability to identify chromosomal defects other than the two specified has not been established.

The PAPP-A test developed and characteristics determined by ARUP Laboratories. See Compliance Statement B: aruplab.com/CS
