

Patient: FIBRON, Val06Jun2016
DOB: 01/01/1950 Age: 66 Gender: M
Patient Identifiers: 463036
Visit Number (FIN): 483648

Client: ARUP Physician Services
321 TESTING ANSR EXTRACT
Salt Lake City, NY 84108
Physician: ARUP

ARUP Test Code: 2012521
Collection Date: 06/04/2016
Received in lab: 06/06/2016
Completion Date: 06/06/2016

Patient Score
(Range 0-1) **1.00**

Metavir Classification¹
F3/F4

Equal probability between F3 and F4

Patient Blood Marker Results

Marker	Result	Reference Interval	Units
ALT	> 5000	5-50	U/L
AST	> 5000	9-50	U/L
Ferritin	10000	30-530	ng/mL
Glucose	451	<=100	mg/dL
Platelets ²	200		k/uL
Weight ²	300		lbs

Interpretive Information

- Calculations for the final report are based on accurate data for age, weight (\pm 5 pounds) and platelet count. If any of the information needs to be corrected, please contact ARUP Client Services at (800) 242-2787.
- The Echosens FibroMeter NAFLD profile serves as a surrogate marker of liver fibrosis in patients with non-alcoholic fatty liver disease. Results may be inaccurate in patients who were not fasting at blood draw, or with other etiologies or chronic liver diseases, such as viral hepatitis or alcoholic liver disease. A proprietary algorithm calculates results from 5 blood markers along with age and weight to provide a patient score (0-1) and a correlated fibrosis stage (Metavir F0-F4). Patients must be fasting at the time of blood draw. Results should be interpreted in conjunction with the patient's clinical history.
- Results should be interpreted with caution if the patient is: under 18 years of age; pregnant; has acute hepatitis; other cause of chronic liver disease; severe chronic inflammatory disease other than liver disease, such as arthritis, organ failure other than liver, such as kidney; iron deficiency; unstable glucose levels; unstable weight.

¹ Metavir is a histological scoring system for determining the extent of liver fibrosis and inflammation.

STAGE OF FIBROSIS (F scale)
F0 = no fibrosis
F1 = portal fibrosis without septa
F2 = portal fibrosis with few septa
F3 = numerous septa without cirrhosis
F4 = cirrhosis
