Hepatitis Be Virus Antibody

ARUP test code 0020095

Hepatitis Be Antibody

Positive * (Ref Interval: Negative)

The anti-HBe is repeatedly reactive, which is consistent with recent or remote Hepatitis B infection. Anti-HBe can be present in a small proportion of chronic HBV infections, but its presence usually indicates resolution. If HBeAg is also positive, this may represent the transition between the appearance of anti-HBe and decline of HBeAg, and retesting in one month may be useful.
