**Hepatitis Be Virus Antibody**

ARUP test code 0020095

Hepatitis Be Antibody

**Positive \* (Ref Interval: Negative)**

The anti-HBe is reactive, which is consistent with recent or remote hepatitis B infection. Anti-HBe can be present in a small proportion of chronic HBV infections, but its presence usually indicates resolution. If HBeAg is also positive, this may represent the transition between the appearance of anti-HBe and decline of HBeAg and retesting in a month may be useful.
