

Client: Example Client ABC123
123 Test Drive
Salt Lake City, UT 84108
UNITED STATES

Physician: Doctor, Example

Patient: Patient, Example

DOB: 11/1/1968
Gender: Female
Patient Identifiers: 01234567890ABCD, 012345
Visit Number (FIN): 01234567890ABCD
Collection Date: 00/00/0000 00:00

Hepatitis B Virus Surface Antigen, Confirmation

ARUP test code 0020128

Hepatitis B Surface Antigen Confirmation	Positive	*	(Ref Interval: Non Confirmed)
<p>Hepatitis B surface antigen (HBsAg) did neutralize using anti-HBs. This specimen is therefore POSITIVE for HBsAg. False positives can occur. If the result is not supported by clinical evidence, repeat testing of a new sample usually helps clarify the diagnosis.</p>			
<p>INTERPRETIVE INFORMATION: Hepatitis B Surface Ag Confirmation</p> <p>This assay should not be used for blood donor screening, associated re-entry protocols, or for screening Human Cells, Tissues and Cellular and Tissue-Based Products (HCT/P).</p>			

Hepatitis B Virus Panel, Chronic with Reflex to HBsAg Confirmation

ARUP test code 0020454

Hepatitis Be Antibody	Negative		(Ref Interval: Negative)
Hepatitis Be Antigen	Negative		(Ref Interval: Negative)
Hepatitis B Surface Antigen	See Confirm		(Ref Interval: Negative)
<p>The HBsAg screen is repeatedly reactive at a low level. Refer to the HBsAg Confirmation test for additional detail.</p> <p>INTERPRETIVE INFORMATION: Hepatitis B Surface Ag</p> <p>This assay should not be used for blood donor screening, associated re-entry protocols, or for screening Human Cells, Tissues and Cellular and Tissue-Based Products (HCT/P).</p>			
Hepatitis B Surface Antibody	10.45 IU/L		
Chronic Hepatitis B Panel Interpretation	See Note		

H=High, L=Low, *=Abnormal, C=Critical

The result pattern of the HBSAg, anti-HBs, HBeAg, and anti-HBe is consistent with three clinical situations: (1) a false positive HBSAg in a person vaccinated against HBV, (2) chronic HBV infection with passively acquired anti-HBs (transfusion with blood or FFP), or (3) early resolving chronic HBV infection. Depending on the clinical situation, testing a new specimen for HBSAg, anti-HBs, and anti-HBc may be useful.

An anti-HBs result greater than or equal to 10 IU/L indicates immunity.

Reference Interval: anti-HBs
9.99 IU/L or less Negative
10.00 IU/L or greater ... Positive
Results greater than 1,000.00 IU/L are reported as greater than 1,000.00 IU/L.
