Hepatitis A Virus Panel

ARUP test code 0020597

Hepatitis A Antibodies, Total **Positive** * (Ref Interval: Negative)
The positive anti-HAV is consistent with recent or remote Hepatitis A infection or antibody response to HAV vaccination. False positive anti-HAV can occur.

Hepatitis A Antibody, IgM **Equivocal** * (Ref Interval: Negative)
The anti-HAV, IgM is borderline and is therefore inconclusive. Retesting at one week intervals may assist in determining the seroconversion status of the patient.

Hepatitis A Panel Interpretation **See Note**

The positive anti-HAV is consistent with recent or remote Hepatitis A infection or antibody response to HAV vaccination.

The anti-HAV, IgM is repeatedly borderline and is therefore inconclusive. Retesting at one week intervals will help distinguish between a rising or falling antibody titer.
