

Client: Example Client ABC123
123 Test Drive
Salt Lake City, UT 84108
UNITED STATES

Physician: Doctor, Example

Patient: Patient, Example

DOB: 12/3/1995
Gender: Female
Patient Identifiers: 01234567890ABCD, 012345
Visit Number (FIN): 01234567890ABCD
Collection Date: 00/00/0000 00:00

Procalcitonin
ARUP test code 0020763

Procalcitonin

0.22 ng/mL H (Ref Interval: 0.00-0.07)

INTERPRETIVE INFORMATION: Procalcitonin
Procalcitonin levels above 2.00 ng/mL on the first day of ICU admission represent a high risk for progression to severe sepsis and/or septic shock.
Procalcitonin < 0.50 ng/mL:
Procalcitonin levels below 0.50 ng/mL on the first day of ICU admission represent a low risk for progression to severe sepsis and/or septic shock.
If the procalcitonin measurement is performed shortly after the systemic infection process has started (usually less than 6 hours), these values may still be low. As various non-infectious conditions are known to induce procalcitonin as well, procalcitonin levels between 0.5 ng/mL and 2.00 ng/mL should be reviewed carefully to take into account the specific clinical background and condition(s) of the individual patient.
Performed At: U HOSPITAL LAB (ARUP)
UNIVERSITY HOSPITAL
CLINICAL LABORATORY
SALT LAKE CITY, UT 84132
Medical Director: LAUREN NICHOLE PEARSON, DO
CLIA Number: 46D0678613
