

Client: Example Client ABC123
123 Test Drive
Salt Lake City, UT 84108
UNITED STATES

Physician: Doctor, Example

Patient: Patient, Example

DOB: 5/18/1954
Gender: Female
Patient Identifiers: 01234567890ABCD, 012345
Visit Number (FIN): 01234567890ABCD
Collection Date: 01/01/2017 12:34

Factor IX Activity with Reflex to Bethesda Quantitative, Factor IX

ARUP test code 0030032

Factor IX, Activity

See Note %

(Ref Interval: 78-184)

Factor IX activity is at least 58 percent. However, the factor IX activity in this sample cannot be accurately quantitated due to non-parallelism. In this functional clot-based assay, factor IX activity is determined using a modified partial thromboplastin time (PTT). Non-parallelism can occur with a specific factor inhibitor directed against a clotting factor involved in the PTT reaction, inhibitor drugs such as heparin (therapy with unfractionated or low molecular weight heparin or contamination from a line), direct factor Xa inhibitors (such as rivaroxaban, apixaban, or edoxaban), direct thrombin inhibitors (such as dabigatran, argatroban, or bivalirudin), or a non-specific inhibitor such as a lupus anticoagulant. Proper interpretation requires correlation with clinical information and the results of any additional laboratory testing.

REFERENCE INTERVAL: Factor IX, Activity

Access complete set of age- and/or gender-specific reference intervals for this test in the ARUP Laboratory Test Directory (aruplab.com).

Bethesda Quantitative, F9

Not Done BU

(Ref Interval: <=0.4)

Because the factor IX was greater than 20 percent, the Bethesda quantitative factor IX inhibitor study was not done.

H=High, L=Low, *=Abnormal, C=Critical
