APC Resistance Profile

ARUP test code 0030127

APC Resistance Panel **1.40** **L** (Ref Interval: ≥ 2.00)

The American College of Medical Genetics recommends that patients who test positive by a functional assay for Factor V Leiden should be further studied with the DNA test for confirmation and to distinguish heterozygotes from homozygotes.

TEST INTERPRETATION: APC Resistance Profile

Ratios less than 2.00 suggest APC resistance. This method uses factor V deficient plasma; therefore, APC resistance due to a nonfactor V mutation will not be detected. Extreme factor V deficiency may cause abnormal ratio.
