The patient is a [REDACTED] female with a reported history of menorrhagia, gum bleeding, and bleeding after wisdom tooth extraction.

The morphologic review of the peripheral blood smears demonstrates apparently adequate platelet number and size variability with rare large forms; the granulation is preserved. The erythrocytes and leukocytes show no significant morphologic abnormalities.

The platelet aggregation studies show normal aggregation patterns in response to collagen, ADP, arachidonic acid, and ristocetin. Please correlate clinically and with the results of other relevant laboratory testing.
