Interpretation

Test Performed: Aneuploidy Panel by FISH (FISHANEU)
Specimen Type: Peripheral blood
Indication for Testing: Ambiguous Genitalia

RESULT
Normal FISH Result (Female)

INTERPRETATION
There was no evidence for aneuploidy of chromosomes 13, 18, 21, X and Y in 200 interphase cells scored.

Aneuploidy of other chromosomes, structural abnormalities, and mosaicism have not been ruled out by this analysis. If this patient is symptomatic, additional testing by chromosome analysis or genomic microarray analysis and/or a genetics consult is recommended. If additional testing is being performed, results will be reported separately.

This analysis was performed with chromosome enumeration probes for 13, 18, 21, X and Y using the Aneuvysion probe kit (Abbott Molecular).

Cytogenomic Nomenclature (ISCN):
