Varicella-Zoster Virus Antibodies, IgG and IgM
ARUP test code 0050162

Varicella-Zoster Virus Ab, IgG

>4000.0 IV
INTERPRETIVE INFORMATION: VZV Ab, IgG
134.9 IV or less ........ Negative - No significant level of detectable IgG varicella-zoster antibody.
135.0 - 164.9 IV ........ Equivocal - Repeat testing in 10-14 days may be helpful.
165.0 IV or greater .... Positive - IgG antibody to varicella-zoster detected, which may indicate a current or past varicella-zoster infection.

The best evidence for current infection is a significant change on two appropriately timed specimens, where both tests are done in the same laboratory at the same time.

Varicella-Zoster Virus Antibody, IgM

1.27 ISR   H (Ref Interval: <=0.90)
INTERPRETIVE INFORMATION: Varicella-Zoster Virus Antibody, IgM

0.90 ISR or less ........ Negative - No significant level of detectable varicella-zoster virus IgM antibody.
0.91-1.09 ISR .......... Equivocal - Repeat testing in 10-14 days may be helpful.
1.10 ISR or greater ...... Positive - Significant level of detectable varicella-zoster virus IgM antibody. Indicative of current or recent infection. However, low levels of IgM antibodies may occasionally persist for more than 12 months post-infection or immunization.
