**Coccidioides Antibody, IgM by ELISA**

ARUP test code 0050178

Coccidioides Antibody, IgM by ELISA

**3.9 IV H**

(Ref Interval: <=0.9)

Positive EIA results should be confirmed with immunodiffusion (ID) or the complement fixation (CF) test. When the ID or CF tests fail to corroborate the EIA results, the diagnosis is less firmly established.

INTERPRETIVE INFORMATION: Coccidioides Antibody, IgM:

- 0.9 IV or less: Negative - No significant level of Coccidioides IgM antibody detected.
- 1.0 - 1.4 IV: Equivocal - Questionable presence of Coccidioides IgM antibody detected. Repeat testing in 10-14 days may be helpful.
- 1.5 IV or greater: Positive - Presence of IgM antibody to Coccidioides detected, suggestive of current or recent infection.

In most symptomatic patients, IgM antibody usually appears by the second week of infection and disappears by the fourth month. Both tube precipitin (TP) and CF antigens are represented in the ELISA tests.
