Physician: Doctor, Example

Patient: Patient, Example

DOB: 6/16/1955
Gender: Female
Patient Identifiers: 01234567890ABCD, 012345
Visit Number (FIN): 01234567890ABCD
Collection Date: 00/00/0000 00:00

C-Reactive Protein, High Sensitivity

ARUP test code 0050182

CRP, High Sensitivity

1.5 mg/L (Ref Interval: <=3.0)

INTERPRETIVE INFORMATION: CRP, High Sensitivity

Patients with higher hs-CRP concentrations are more likely to develop stroke, myocardial infarction, and severe peripheral vascular disease.

CRP is a nonspecific marker of inflammation and a variety of conditions other than atherosclerosis may cause elevated concentrations. If the first result is greater than 3.0 mg/L, recommend repeating test at least 2 weeks later in a metabolically stable state, free of infection or acute illness. The lower of the two results should be used to determine the patient's risk.

Significantly decreased CRP values may result in specimens from patients treated with carboxypenicillins.

hs-CRP results are used to assign risk as follows :
less than 1.0 mg/L low risk
1.0 - 3.0 mg/L average risk
greater than 3.0 mg/L ... high risk

VERIFIED/REPORTED DATES

Procedure	Accession	Collected	Received	Verified/Reported
CRP, High Sensitivity	23-271-141502	00/00/0000 00:00	00/00/0000 00:00	00/00/0000 00:00
