Borrelia burgdorferi Antibodies, Total by ELISA
ARUP test code 0050216

Borrelia burgdorferi Abs, Total by ELISA 1.68 LIV H (Ref Interval: 0.00-1.20)

Current CDC recommendations for the serologic diagnosis of Lyme disease are to screen with a polyvalent ELISA test and confirm equivocal and positive results with Immunoblot. Both IgM and IgG Immunoblots should be performed on specimens less than 4 weeks after appearance of erythema migrans. Only IgG Immunoblot should be performed on specimens greater than 4 weeks after the disease onset. IgM Immunoblot in the chronic stage is not recommended and does not aid in the diagnosis of neuroborreliosis or chronic Lyme disease. Please submit requests for appropriate Immunoblot testing within 10 days.

INTERPRETIVE INFORMATION: Borrelia Burgdorferi Abs,Total by ELISA

0.99 LIV or Less: ...... Negative: Antibody to B. burgdorferi not detected.
1.00 - 1.20 LIV........ Equivocal: Repeat testing in 10-14 days may be helpful.
1.21 LIV or Greater: ... Positive: Probable presence of antibody to B. burgdorferi detected.
