

Client: Example Client ABC123 123 Test Drive Salt Lake City, UT 84108 UNITED STATES

Physician: Doctor, Example

Patient: Patient, Example

DOB 9/28/1934

Gender: Male

Patient Identifiers: 01234567890ABCD, 012345

Visit Number (FIN): 01234567890ABCD **Collection Date:** 00/00/0000 00:00

Erythropoietin

ARUP test code 0050227

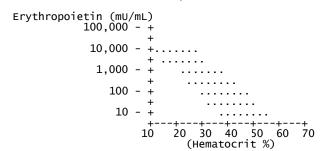

Erythropoietin

162 mU/mL H (Ref Interval: 4-27)

INTERPRETIVE INFORMATION: Erythropoietin Normal serum concentrations of erythropoietin for 95% of individuals with normal hematocrits range from 4-27 mU/mL.

As the hematocrit is lowered by iron deficiency, aplastic, or hemolytic anemia, the concentration of erythropoietin increases as shown in the graph below. In the absence of anemia, elevated concentrations are seen in renal tumors, as a manifestation of renal transplant rejection, and in secondary polycythemia. Low values may be observed in hemochromatosis.

Expected Erythropoietin Concentrations in Patients with Uncomplicated Anemia

(Contributions To Nephrology 1988:66:54-62)

Decreased erythropoietin concentrations with an elevated hematocrit are observed in patients with polycythemia rubra vera, and with a decreased hematocrit in patients with HIV infection who are receiving AZT. Patients on AZT who have anemia and erythropoietin concentrations of less than or equal to 500 mU/mL may benefit from therapy with recombinant EPO (NEJM 322:1488-1493,1990).
