

Client: Example Client ABC123
123 Test Drive
Salt Lake City, UT 84108
UNITED STATES

Physician: Doctor, Example

Patient: Patient, Example

DOB: 5/22/1955
Gender: Male
Patient Identifiers: 01234567890ABCD, 012345
Visit Number (FIN): 01234567890ABCD
Collection Date: 01/01/2017 12:34

Legionella pneumophila Antibody (Types 1-6), IgG by IFA

ARUP test code 0050365

Legionella Pneumophila 1-6,IgG

1:512 * (Ref Interval: <1:128)

INTERPRETIVE INFORMATION: Legionella pneumophila Antibody (Types 1-6), IgG by IFA

Less than 1:128	Negative - No significant level of Legionella pneumophila Type 1-6 IgG antibody detected.
1:128	Equivocal - Questionable presence of Legionella pneumophila Type 1-6 IgG antibody detected. Repeat testing in 10-14 days may be helpful.
1:256 or greater	Positive - Presence of IgG Legionella pneumophila Type 1-6 detected, suggestive of current or past infection.

Seroconversion between acute and convalescent sera is considered strong evidence of recent infection. The best evidence for infection is a significant change on two appropriately timed specimens where both tests are done in the same laboratory at the same time. This assay may detect infection by any of the serotypes 1-6. The CDC and many state health laboratories recommend testing only for antibody to Legionella pneumophila Type 1. For equivocal or positive IFA results, the CDC protocol suggests follow-up testing for Legionella pneumophila antibody Type 1.
