UNITED STATES

Physician: Doctor, Example

Patient: Patient, Example

DOB: 7/30/1956
Gender: Male
Patient Identifiers: 01234567890ABCD, 012345
Visit Number (FIN): 01234567890ABCD
Collection Date: 00/00/0000 00:00

Rickettsia rickettsii (Rocky Mountain Spotted Fever) Antibody, IgG

ARUP test code 0050369

Rocky Mt Spotted Fever IgG

1:128 * (Ref Interval: <1:64)

INTERPRETIVE INFORMATION: Rickettsia rickettsii (Rocky Mtn. Spotted Fever) Ab, IgG

- Less than 1:64 Negative - No significant level of IgG antibody detected.
- 1:64 - 1:128 Low Positive - Presence of IgG Antibody detected, suggestive of current or past infection.
- 1:256 or greater Positive - Presence of IgG antibody detected, suggestive of current or past infection.

Antibody reactivity to Rickettsia rickettsii antigen should be considered Spotted Fever group reactive. Other organisms within the group include R. akari, R. conorii, R. australis and R. sibirica.

Seroconversion, a fourfold or greater rise in antibody titer, between acute and convalescent sera is considered strong evidence of recent infection. Acute-phase specimens are collected during the first week of illness and convalescent-phase samples are generally obtained 2-4 weeks after resolution of illness. Ideally these samples should be tested simultaneously at the same facility. If the sample submitted was collected during the acute-phase of illness, submit a marked convalescent sample within 25 days for paired testing.

H=High, L=Low, *=Abnormal, C=Critical
