Measles (Rubeola) Antibodies, IgG and IgM

**Measles, Rubeola, Antibody IgG**

- **>300.0 AU/mL**
  - **INTERPRETIVE INFORMATION:** Measles (Rubeola) Antibody, IgG
    - 13.4 AU/mL or less ........ Negative - No significant level of detectable measles (rubeola) IgG antibody.
    - 13.5-16.4 AU/mL .......... Equivocal - Repeat testing in 10-14 days may be helpful.
    - 16.5 AU/mL or greater .... Positive - IgG antibody to measles (rubeola) detected which may indicate a current or past exposure/immunization to measles (rubeola).

The best evidence for current infection is a significant change on two appropriately timed specimens, where both tests are done in the same laboratory at the same time.

**Measles, Rubeola, Antibody IgM**

- **11.34 AU H** *(Ref Interval: 0.00-0.79)*
  - Repeated and verified.

**INTERPRETIVE INFORMATION:** Measles (Rubeola) Antibody, IgM

- 0.79 AU or less ........ Negative - No significant level of IgM antibody to measles (rubeola) virus detected.
- 0.80 - 1.20 AU .......... Equivocal - Repeat testing in 10-14 days may be helpful.
- 1.21 AU or greater ...... Positive - IgM antibody to measles (rubeola) virus detected. Suggestive of a current or recent infection or immunization. However, low levels of IgM antibodies may occasionally persist for more than 12 months post-infection or immunization.

*H=High, L=Low, *=Abnormal, C=Critical*
