

Client: Example Client ABC123
123 Test Drive
Salt Lake City, UT 84108
UNITED STATES

Physician: Doctor, Example

Patient: Patient, Example

DOB 11/3/1993
Gender: Female
Patient Identifiers: 01234567890ABCD, 012345
Visit Number (FIN): 01234567890ABCD
Collection Date: 00/00/0000 00:00

Herpes Simplex Virus Type 1 and/or 2 Antibodies, IgG, CSF

ARUP test code 0050394

HSV 1/2 Antibody Screen IgG, CSF

0.73 IV (Ref Interval: ≤0.89)
INTERPRETIVE INFORMATION: Herpes Simplex Virus Type 1 and/or 2
Antibodies, IgG CSF
0.89 IV or Less Negative: No significant
level of detectable HSV IgG
antibody.
0.90 - 1.09 IV Equivocal: Questionable
presence of IgG antibodies.
Repeat testing in 10-14 days
may be helpful.
1.10 IV or Greater Positive: IgG antibody to HSV
detected, which may indicate
a current or past HSV
infection.

The detection of antibodies to herpes simplex virus in CSF may indicate central nervous system infection. However, consideration must be given to possible contamination by blood or transfer of serum antibodies across the blood-brain barrier.

Fourfold or greater rise in CSF antibodies to herpes on specimens at least 4 weeks apart are found in 74-94 % of patients with herpes encephalitis. Specificity of the test based on a single CSF testing is not established. Presently PCR is the primary means of establishing a diagnosis of herpes encephalitis.

This test was developed and its performance characteristics determined by ARUP Laboratories. It has not been cleared or approved by the US Food and Drug Administration. This test was performed in a CLIA certified laboratory and is intended for clinical purposes.
