123 Test Drive
Salt Lake City, UT 84108
UNITED STATES

Physician: Doctor, Example

Patient: Patient, Example

DOB: 6/2/2001
Gender: Female
Patient Identifiers: 01234567890ABCD, 012345
Visit Number (FIN): 01234567890ABCD
Collection Date: 00/00/0000 00:00

Mycoplasma pneumoniae Antibody, IgG

ARUP test code 0050397

Mycoplasma Pneumoniae Antibody IgG

0.04 U/L (Ref Interval: <=0.09)

INTERPRETIVE INFORMATION: Mycoplasma pneumoniae Ab, IgG

0.09 U/L or less Negative
0.10 - 0.32 U/L Equivocal
0.33 U/L or greater Positive

INTERPRETIVE DATA: Over 50% of healthy adults have a relatively high background of specific M. pneumoniae IgG antibodies in their sera, probably because of past M. pneumoniae infections. Therefore, paired sera obtained with a time interval of 1 to 3 weeks are highly recommended in adults to confirm reinfection by M. pneumoniae, which is demonstrated by a significant change in IgG antibodies. A significant change is indicated if one sample is above 0.32 U/L and the other is below 0.20 U/L.
