Mycoplasma pneumoniae Antibody, IgG  
ARUP test code 0050397

1.74 U/L  H  
(Ref Interval: <=0.09)

INTERPRETIVE INFORMATION:  
Mycoplasma pneumoniae Ab, IgG
0.09 U/L or less ............ Negative
0.10 - 0.32 U/L ............ Equivocal
0.33 U/L or greater ........ Positive

INTERPRETIVE DATA:  Over 50% of healthy adults have a relatively high background of specific M. pneumoniae IgG antibodies in their sera, probably because of past M. pneumoniae infections. Therefore, paired sera obtained with a time interval of 1 to 3 weeks are highly recommended in adults to confirm reinfection by M. pneumoniae, which is demonstrated by a significant change in IgG antibodies. A significant change is indicated if one sample is above 0.32 U/L and the other is below 0.20 U/L.
