Mycoplasma Pneumoniae Antibody IgM	0.00 U/L	(Ref Interval: <=0.76)			
	INTERPRETIVE INFORMATION: Mycoplasma pneumoniae Ab, IgM 0.76 U/L or less Negative: No clinically significant amount of M. pneumoniae IgM antibody detected.				
	0.77 - 0.95 U/L	Low Positive: M. pneumoniae- specific IgM presumptively detected. Collection of a follow-up sample in 1-2 weeks is recommended to assure reactivity.			
	0.96 U/L or greate				
Mycoplasma Pneumoniae Antibody IgG	0.02 U/L	(Ref Interval: <=0.09)			
	INTERPRETIVE INFORMATION: Mycoplasma pneumoniae Ab, IgG 0.09 U/L or less Negative 0.10 - 0.32 U/L Equivocal 0.33 U/L or greater Positive				
	INTERPRETIVE DATA: Over 50% of healthy adults have a relatively high background of specific M. pneumoniae IgG antibodies in their sera, probably because of past M. pneumoniae infections. Therefore, paired sera obtained with a time interval of 1 to 3 weeks are highly recommended in adults to confirm reinfection by M. pneumoniae, which is demonstrated by a significant change in IgG antibodies. A significant change is indicated if one sample is above 0.32 U/L and the other is below 0.20 U/L.
