Rubella Antibody, IgM

ARUP test code 0050551

Rubella Antibody IgM

<10.0 AU/mL (Ref Interval: <=19.9)

INTERPRETIVE INFORMATION: Rubella Ab, IgM

19.9 AU/mL or less..... Not Detected
20.0-24.9 AU/mL..... Indeterminate-Repeat testing
in 10-14 days may be helpful.
25.0 AU/mL or greater..... Detected-IgM antibody to
Rubella detected which may
indicate a current or recent
infection or immunization.

Testing immediately post-exposure is of no value without a later
convalescent specimen. While the presence of IgM antibodies
suggest current or recent infection, low levels of IgM
antibodies may occasionally persist for more than 12 months
post-infection or immunization.

The magnitude of the measured result is not indicative of the
amount of antibody present.
