Rubella Antibody IgM

**27.3 AU/mL H (Ref Interval: <=19.9)**

INTERPRETIVE INFORMATION: Rubella Ab, IgM

19.9 AU/mL or less..... Not Detected  
20.0-24.9 AU/mL..... Indeterminate-Repeat testing  
in 10-14 days may be helpful.  
25.0 AU/mL or greater..... Detected-IgM antibody to  
Rubella detected which may  
indicate a current or recent  
infection or immunization.

Testing immediately post-exposure is of no value without a later convalescent specimen. While the presence of IgM antibodies suggest current or recent infection, low levels of IgM antibodies may occasionally persist for more than 12 months post-infection or immunization.

The magnitude of the measured result is not indicative of the amount of antibody present.
