Rubella Antibodies, IgG and IgM

ARUP test code 0050552

Rubella Antibody IgG

7.6 IU/mL

INTERPRETIVE INFORMATION: Rubella Antibody, IgG

Less than 9 IU/mL Not Detected
9 - 9.9 IU/mL Indeterminate-Repeat testing in
10-14 days may be helpful.
10 IU/mL or Greater Detected

The best evidence for current infection is a significant change on two appropriately timed specimens, where both tests are done in the same laboratory at the same time.

The magnitude of the measured result is not indicative of the amount of antibody present.

Rubella Antibody IgM

10.0 AU/mL (Ref Interval: <=19.9)

INTERPRETIVE INFORMATION: Rubella Ab, IgM

19.9 AU/mL or less..... Not Detected
20.0-24.9 AU/mL..... Indeterminate-Repeat testing
in 10-14 days may be helpful.
25.0 AU/mL or greater..... Detected-IgM antibody to
Rubella detected which may
indicate a current or recent
infection or immunization.

Testing immediately post-exposure is of no value without a later convalescent specimen. While the presence of IgM antibodies suggest current or recent infection, low levels of IgM antibodies may occasionally persist for more than 12 months post-infection or immunization.

The magnitude of the measured result is not indicative of the amount of antibody present.
