## Extractable Nuclear Antigen Antibodies (Smith/RNP, Smith, SSA 52, SSA 6o, and SSB) <br> ARUP test code 0050652

| Smith (ENA) Antibody, IgG | $2 \mathrm{AU} / \mathrm{mL}$ <br> (Ref Interval: 0-40) <br> INTERPRETIVE INFORMATION: Smith (ENA) Antibody, IgG <br> $29 \mathrm{AU} / \mathrm{mL}$ or Less ................. Negative <br> 30-40 AU/mL ...................... Equivocal <br> $41 \mathrm{AU} / \mathrm{mL}$ or Greater ............ Positive <br> Smith antibody is highly specific (greater than 90 percent) for systemic lupus erythematosus (SLE) but only occurs in 30-35 percent of SLE cases. The presence of antibodies to Smith has variable associations with SLE clinical manifestations. |
| :---: | :---: |
| SSA-52 (Ro52) (ENA) Antibody, IgG | $2 \mathrm{AU} / \mathrm{mL} \quad$ (Ref Interval: 0-40) <br> INTERPRETIVE INFORMATION: SSA-52 (Ro52) (ENA) Antibody, IgG <br> $29 \mathrm{AU} / \mathrm{mL}$ or Less .................. Negative <br> 30-40 AU/mL ....................... Equivoca1 <br> $41 \mathrm{AU} / \mathrm{mL}$ or Greater ............ Positive <br> SSA-52 (Ro52) and/or SSA-60 (Ro60) antibodies are associated with a diagnosis of sjogren syndrome, systemic lupus erythematosus (SLE), and systemic sclerosis. SSA-52 antibody overlaps significantly with the major SSc-related antibodies. SSA-52 (Ro52) antibody occurs frequently in patients with inflammatory myopathies, often in the presence of interstitial lung disease. |
| SSA-60 (Ro60) (ENA) Antibody, IgG | $1 \mathrm{AU} / \mathrm{mL} \quad$ (Ref Interval: 0-40) <br> Reference interval: ssa-60 (ro60) (ena) Antibody, Igg <br> $29 \mathrm{AU} / \mathrm{mL}$ or Less .............. Negative <br> $30-40 \mathrm{AU} / \mathrm{mL} . . . . . . . . . . . .$. . Equivocal <br> $41 \mathrm{AU} / \mathrm{mL}$ or Greater ........... Positive |
| Smith/RNP (ENA) Ab, IgG | 2 Units (Ref Interval: 0-19) |

H=High, L=Low, *=Abnorma1, C=Critical

|  | INTERPRETIVE INFORMATION: Smith/RNP (ENA) Antibody, IgG <br> 19 Units or Less ............... Negative <br> 20 to 39 Units .................. Weak Positive <br> 40 to 80 Units ................ Moderate Positive <br> 81 Units or greater .......... Strong Positive <br> Smith/RNP antibodies are frequently seen in patients with mixed connective tịssue disease (MCTD) and are also associated with other systemic autoimmune rheumatic diseases (SARDs) such as systemic lupus erythematosus (SLE), systemic sclerosis, and myositis. Antibodies targeting the smith/RNP antigenic complex also recognize smith antigens, therefore, the Smith antibody response must be considered when interpreting these results. |
| :---: | :---: |
| SSB (La) (ENA) Antibody, IgG | $0 \mathrm{AU} / \mathrm{mL}$ (Ref Interval: 0-40) |
|  | INTERPRETIVE INFORMATION: SSB (La) (ENA) Ab, IgG <br>  <br> $41 \mathrm{AU} / \mathrm{mL}$ or Greater ............ Positive |
|  | SSB (La) antibody is seen in $50-60 \%$ of sjogren syndrome cases and is specific if it is the only ENA antibody present. 15-25\% of patients with systemic lupus erythematosus (SLE) and 5-10\% of patients with progressive systemic sclerosis (PSS) also have this antibody. |

| VERIFIED/REPORTED DATES |  |  |  |  |
