**Glomerular Basement Membrane Antibody, IgG by Multiplex Bead Assay**

ARUP test code 0051000

GBM Ab, IgG by Multiplex Bead Assay

0 AU/mL (Ref Interval: 0-19)  
INTERPRETIVE INFORMATION: GBM Ab, IgG by Multiplex Bead Assay

19 AU/mL or Less ..... Negative  
20-25 AU/mL ..... Equivocal  
26 AU/mL or Greater ..... Positive

The presence of anti-glomerular basement membrane (GBM) antibodies by Multiplex Bead Assay may aid in the diagnosis of Goodpasture syndrome. False positive results may occur due to reactivity against other chains of type IV collagen. If Multiplex Bead Assay is negative but there is a strong suspicion for disease, renal biopsy may be indicated. A renal biopsy may also be essential in suspected Goodpasture disease with renal involvement, allowing diagnostic confirmation and assessment of renal prognosis.
