Collection Date: 00/00/0000 00:00

F-Actin (Smooth Muscle) Antibody, IgG by ELISA with Reflex to Smooth Muscle Antibody, IgG Titer

ARUP test code 0051174

F-Actin (Smooth Muscle) Ab, IgG by ELISA 10 Units (Ref Interval: 0-19)

If F-Actin (Smooth Muscle) Antibody, IgG is negative, the Smooth Muscle Antibody titer by IFA is not performed.

REFERENCE INTERVAL: F-Actin (Smooth Muscle) Antibody, IgG by ELISA

- 19 Units or less Negative
- 20 - 30 Units Weak Positive-Suggest repeat testing in two to three weeks with fresh specimen.
- 31 Units or greater..... Positive-Suggestive of autoimmune hepatitis type 1 or chronic active hepatitis.

F-actin IgG antibodies have been shown to have increased sensitivity for autoimmune hepatitis (AIH) but lower specificity than smooth muscle antibodies (SMA). F-actin IgG antibodies can also be seen in SMA-negative disease controls (non-AIH), especially in patients with primary biliary cirrhosis and chronic hepatitis C infections. Some patients with AIH may be SMA-positive but negative for F-actin IgG. Consider testing for SMA by IFA if suspicion for AIH is strong.
