

Client: Example Client ABC123
123 Test Drive
Salt Lake City, UT 84108
UNITED STATES

Physician: Doctor, Example

Patient: Patient, Example

DOB: 4/10/1977
Gender: Female
Patient Identifiers: 01234567890ABCD, 012345
Visit Number (FIN): 01234567890ABCD
Collection Date: 00/00/0000 00:00

Measles (Rubeola) Antibody, IgG, CSF

ARUP test code 0054440

Measles, Rubeola, Antibody IgG CSF

92.1 AU/mL H (Ref Interval: <=16.4)

INTERPRETIVE INFORMATION: Measles (Rubeola) Antibody, IgG, CSF

13.4 AU/mL or less Negative - No significant level of IgG antibody to measles (rubeola) virus detected.
13.5-16.4 AU/mL Equivocal - Repeat testing in 10-14 days may be helpful.
16.5 AU/mL or greater Positive - IgG antibody to measles (rubeola) detected, which may indicate a current or past exposure/immunization to measles (rubeola).

The detection of antibodies to rubeola in CSF may indicate central nervous system infection. However, consideration must be given to possible contamination by blood or transfer of serum antibodies across the blood-brain barrier.

This test was developed and its performance characteristics determined by ARUP Laboratories. It has not been cleared or approved by the US Food and Drug Administration. This test was performed in a CLIA certified laboratory and is intended for clinical purposes.
