

Client: Example Client ABC123
123 Test Drive
Salt Lake City, UT 84108
UNITED STATES

Physician: Doctor, Example

Patient: Patient, Example

DOB: 12/1/1991
Gender: Male
Patient Identifiers: 01234567890ABCD, 012345
Visit Number (FIN): 01234567890ABCD
Collection Date: 00/00/0000 00:00

Measles (Rubeola) Antibody, IgM, CSF
ARUP test code 0054441

Measles, Rubeola, Antibody IgM CSF	0.28 AU	(Ref Interval: 0.00-0.79)
INTERPRETIVE INFORMATION: Measles (Rubeola) Antibody, IgM, CSF		
	0.79 AU or less	Negative - No significant level of IgM antibody to measles (rubeola) virus detected.
	0.80 - 1.20 AU	Equivocal - Repeat testing in 10-14 days may be helpful.
	1.21 AU or greater	Positive - IgM antibodies to measles (rubeola) virus detected. Suggestive of current or recent infection. However, low levels of IgM antibodies may occasionally persist for more than 12 months post-infection.
The detection of antibodies to rubeola in CSF may indicate central nervous system infection. However, consideration must be given to possible contamination by blood or transfer of serum antibodies across the blood-brain barrier.		
This test was developed and its performance characteristics determined by ARUP Laboratories. It has not been cleared or approved by the US Food and Drug Administration. This test was performed in a CLIA certified laboratory and is intended for clinical purposes.		

H=High, L=Low, *=Abnormal, C=Critical

Unless otherwise indicated, testing performed at:
