

Client: Example Client ABC123  
123 Test Drive  
Salt Lake City, UT 84108  
UNITED STATES

Physician: Doctor, Example

Patient: Patient, Example

DOB 11/25/2000

Gender: Male

Patient Identifiers: 01234567890ABCD, 012345

Visit Number (FIN): 01234567890ABCD

Collection Date: 00/00/0000 00:00

Measles (Rubeola) Antibody, IgM, CSF

ARUP test code 0054441

Measles, Rubeola, Antibody IgM CSF	3.12 AU	H	(Ref Interval: 0.00-0.79)
INTERPRETIVE INFORMATION: Measles (Rubeola) Antibody, IgM, CSF			
	0.79 AU or less	.....	Negative - No significant level of IgM antibody to measles (rubeola) virus detected.
	0.80 - 1.20 AU	.....	Equivocal - Repeat testing in 10-14 days may be helpful.
	1.21 AU or greater	.....	Positive - IgM antibodies to measles (rubeola) virus detected. Suggestive of current or recent infection. However, low levels of IgM antibodies may occasionally persist for more than 12 months post-infection.
The detection of antibodies to rubeola in CSF may indicate central nervous system infection. However, consideration must be given to possible contamination by blood or transfer of serum antibodies across the blood-brain barrier.			
This test was developed and its performance characteristics determined by ARUP Laboratories. It has not been cleared or approved by the US Food and Drug Administration. This test was performed in a CLIA certified laboratory and is intended for clinical purposes.			

H=High, L=Low, \*=Abnormal, C=Critical
