Physician: Doctor, Example

Patient: Patient, Example

DOB: 12/1/1991
Gender: Male
Patient Identifiers: 01234567890ABCD, 012345
Visit Number (FIN): 01234567890ABCD
Collection Date: 00/00/0000 00:00

Mumps Virus Antibody IgM, CSF

ARUP test code 0054443

Mumps Virus Antibody IgM CSF

0.18 IV (Ref Interval: <=0.79)

INTERPRETIVE INFORMATION: Mumps Virus Antibody, IgM, CSF

- 0.79 IV or less: Negative - No significant level of detectable IgM antibody to mumps virus.
- 0.80 - 1.20 IV: Equivocal - Borderline levels of IgM antibody to mumps virus. Repeat testing in 10-14 days may be helpful.
- 1.21 IV or greater: Positive - Presence of IgM antibody to mumps virus detected, which may indicate a current or recent infection. However, low levels of IgM antibody may occasionally persist for more than 12 months post-infection or immunization.

The detection of antibodies to mumps in CSF may indicate central nervous system infection. However, consideration must be given to possible contamination by blood or transfer of serum antibodies across the blood-brain barrier.

This test was developed and its performance characteristics determined by ARUP Laboratories. It has not been cleared or approved by the US Food and Drug Administration. This test was performed in a CLIA certified laboratory and is intended for clinical purposes.
