

Client: Example Client ABC123  
123 Test Drive  
Salt Lake City, UT 84108  
UNITED STATES

Physician: Doctor, Example

**Patient: Patient, Example**

**DOB:** 9/8/1980  
**Gender:** Female  
**Patient Identifiers:** 01234567890ABCD, 012345  
**Visit Number (FIN):** 01234567890ABCD  
**Collection Date:** 00/00/0000 00:00

**Varicella-Zoster Virus Antibody, IgG, CSF**

ARUP test code 0054444

VZV Antibody IgG CSF

26.8 IV

INTERPRETIVE INFORMATION: VZV Ab, IgG, CSF

- 134.9 IV or Less .... Negative: No significant level of IgG antibody to varicella-zoster virus detected.
- 135.0 - 164.9 IV ..... Equivocal: Repeat testing in 10-14 days may be helpful.
- 165.0 IV or Greater .. Positive: IgG antibody to varicella-zoster virus detected, which may indicate a current or past varicella-zoster infection.

The detection of antibodies to varicella-zoster in CSF may indicate central nervous system infection. However, consideration must be given to possible contamination by blood or transfer of serum antibodies across the blood-brain barrier.

This test was developed and its performance characteristics determined by ARUP Laboratories. It has not been cleared or approved by the US Food and Drug Administration. This test was performed in a CLIA certified laboratory and is intended for clinical purposes.
