Cysticercosis Antibody, IgG by ELISA (CSF)

ARUP test code 0055285

Cysticercosis Ab, IgG by ELISA, CSF

0.2 IV (Ref Interval: <=0.8)
INTERPRETIVE INFORMATION: Cysticercosis Ab, IgG by ELISA (CSF)

0.8 IV or Less	Negative - No significant level of cysticercosis IgG antibody detected.
0.9 - 1.1 IV	Equivocal - Questionable presence of cysticercosis IgG antibody detected. Repeat testing in 10-14 days may be helpful.
1.2 IV or Greater	Positive - IgG antibody to cysticercosis detected, which may suggest current or past infection.

Diagnosis of central nervous system infections can be accomplished by demonstrating the presence of intrathecally-produced specific antibody. Interpretation of results may be complicated by low antibody levels found in CSF, passive transfer of antibody from blood, and contamination via bloody taps.

A negative result does not rule out infection. Repeat testing after 4 weeks if clinical suspicion is high. Cross-reaction with antibodies against Echinococcus ssp. have been reported.
