

Client: Example Client ABC123
123 Test Drive
Salt Lake City, UT 84108
UNITED STATES

Physician: Doctor, Example

Patient: Patient, Example

DOB: 7/15/1977
Gender: Male
Patient Identifiers: 01234567890ABCD, 012345
Visit Number (FIN): 01234567890ABCD
Collection Date: 00/00/0000 00:00

Cysticercosis Antibody, IgG by ELISA (CSF)

ARUP test code 0055285

Cysticercosis Ab, IgG by ELISA, CSF

29 U H (Ref Interval: <=8)

INTERPRETIVE INFORMATION: Cysticercosis Ab, IgG by ELISA (CSF)

- <9 U Negative - No significant level of cysticercosis IgG antibody detected.
- 9-11 U Equivocal - Recommend repeat testing in 2-4 weeks with fresh sample.
- >11 U Positive - IgG antibodies to cysticercosis detected, which may suggest current or past infection.

Diagnosis of central nervous system infections can be accomplished by demonstrating the presence of intrathecally-produced specific antibody. Interpretation of results may be complicated by low antibody levels found in CSF, passive transfer of antibody from blood, and contamination via bloody taps.

A negative result does not rule out infection. Repeat testing after 4 weeks if clinical suspicion is high. Cross-reaction with antibodies against Echinococcus ssp. have been reported.

This test was developed and its performance characteristics determined by ARUP Laboratories. It has not been cleared or approved by the US Food and Drug Administration. This test was performed in a CLIA certified laboratory and is intended for clinical purposes.

H=High, L=Low, *=Abnormal, C=Critical
