**Aldosterone, Serum**

ARUP test code 0070015

Aldosterone

10.3 ng/dL

INTERPRETIVE INFORMATION: Aldosterone, Serum

Reference intervals for age 15 and older:

Upright ..... 4.0 - 31.0 ng/dL  
Supine ..... Less than or equal to 16.0 ng/dL  
Unspecified ..... Less than or equal to 31.0 ng/dL

Normal serum levels of aldosterone are dependent on the sodium intake and whether the patient is upright or supine. High sodium intake will tend to suppress serum aldosterone, whereas low sodium intake will elevate serum aldosterone. The reference intervals for serum aldosterone are based on normal sodium intake.

Access complete set of age- and/or gender-specific reference intervals for this test in the ARUP Laboratory Test Directory (aruplab.com).
