Visit Number (FIN): 01234567890ABCD
Collection Date: 00/00/0000 00:00

Prostate Specific Antigen, Total

ARUP test code 0070121

Prostate Specific Antigen, Total

1.6 ng/mL (Ref Interval: 0.0-4.0)

INTERPRETIVE INFORMATION: Prostate Specific Antigen

The Roche PSA electrochemiluminescent immunoassay was used. Results obtained with different test methods or kits cannot be used interchangeably. The Roche PSA method is approved for use as an aid in the detection of prostate cancer when used in conjunction with a digital rectal exam in men age 50 and older. The Roche PSA method is also indicated for the serial measurement of PSA to aid in the prognosis and management of prostate cancer patients. Elevated PSA concentrations can only suggest the presence of prostate cancer until biopsy is performed. PSA concentrations can also be elevated in benign prostatic hyperplasia or inflammatory conditions of the prostate. PSA is generally not elevated in healthy men or men with non-prostatic carcinoma.
