INTERPRETIVE INFORMATION: 5-Hydroxyindoleacetic Acid (HIAA), Urine

5-Hydroxyindoleacetic acid (5-HIAA) results are expressed as a ratio to creatinine excretion (mg/g CRT). HIAA mass per day (mg/d) is not reported if urine collection is random or other than 24 hours, or if urine volume less than 400 mL/d. No reference interval is available for results reported in units of mg/L. Increased urine 5-HIAA concentration is common and may be the result of improper specimen collection, consumption of serotonin containing foods or dietary supplements, drug interference, or malabsorption syndromes. Significant elevation (ten times the upper reference limit) of urine 5-HIAA may indicate the presence of a carcinoid tumor.
