Vanillylmandelic Acid (VMA), Urine

ARUP test code 00804	121
----------------------	-----

Hours Collected	24 ł	nr

Per 24h calculations are provided to aid interpretation for collections with a duration of 24 hours and an average daily urine volume. For specimens with notable deviations in collection time or volume, ratios of analytes to a corresponding urine creatinine concentration may assist in result

interpretation.

Total Volume	784 m	ı

Creatinine, Urine - per volume 93 mg/dL

Creatinine, Urine - per 24h 729 mg/d (Ref Interval: 500-1400)

Vanillylmandelic Acid - per volume 3.3 mg/L

Vanillylmandelic Acid - ratio to CRT 4 mg/gCR (Ref Interval: 0-6)

REFERENCE INTERVAL: VMA, Urine mg/g CRT

Access complete set of age- and/or gender-specific reference intervals for this test in the ARUP Laboratory Test Directory

(aruplab.com).

INTERPRETIVE INFORMATION: Vanillylmandelic Acid (VMA), Urine

Vanillylmandelic acid (VMA) results are expressed as a ratio to creatinine excretion (mg/g CRT). No reference interval is available for results reported in units of mg/L. Slight or moderate increases in catecholamine metabolites may be due to extreme anxiety, essential hypertension, intense physical exercise, or drug interactions. Significant increase of one or more catecholamine metabolites (several times the upper reference limit) is associated with an increased probability of a secreting neuroendocrine tumor.

This test was developed and its performance characteristics determined by ARUP Laboratories. It has not been cleared or approved by the US Food and Drug Administration. This test was performed in a CLIA certified laboratory and is intended for clinical purposes.
