Alpha Fetoprotein, Total and L3 Percent

ARUP test code 0081208

Alpha Fetoprotein Total 3 ng/mL (Ref Interval: 0-15)

Alpha Fetoprotein L3 Pct <0.5 % (Ref Interval: 0.0-9.9)
INTERPRETIVE INFORMATION: Alpha Fetoprotein L3 Percent

The uTASwako method is used. Results obtained with different assay methods or kits cannot be used interchangeably.

The AFP-L3 Percent assay is intended as a risk assessment for the development of hepatocellular carcinoma in patients with chronic liver diseases.

Patients with elevated serum AFP-L3 percent should be more intensely evaluated for evidence of hepatocellular carcinoma since elevated values have been shown to be associated with a seven-fold increase in the risk for developing hepatocellular carcinoma within 21 months. Results cannot be interpreted as absolute evidence of the presence or absence of malignant disease.

For pregnant females, the result is not interpretable as a tumor marker.
