Drug Panel 9, Screen Only - Comments

See Note

INTERPRETIVE INFORMATION: Drug Panel 9, Screen Only, Urine

This is a screening test only. False positive and false negative results can occur. Positive results are not automatically reflexed to a confirmatory test. Confirmation by GC/MS and/or LC-MS/MS must be requested separately. Confirmatory testing for drugs and/or drug classes detected by this screening test is recommended.

The absence of expected drug(s) and/or drug metabolite(s) may indicate non-compliance, inappropriate timing of specimen collection relative to drug administration, poor drug absorption, diluted/adulterated urine, or limitations of testing. The concentration at which the screening test can detect a drug or metabolite varies within a drug class. The concentration value must be greater than or equal to the cutoff to be reported as positive. Interpretive questions should be directed to the laboratory.

The following opioids are not detected in this test: fentanyl, buprenorphine, meperidine, tramadol, and tapentadol. A comprehensive panel that includes these opioids is available or individual opioid testing can be ordered. Refer to aruplab.com for test information.

For medical purposes only; not valid for forensic use.
