Positive cutoff: 5 ng/mL

For medical purposes only; not valid for forensic use.

The drug analyte detected in this assay, 9-carboxy THC, is a
metabolite of delta-9-tetrahydrocannabinol (THC). Detection of
9-carboxy THC suggests use of, or exposure to, a product
containing THC. This test cannot distinguish between prescribed
or non-prescribed forms of THC, nor can it distinguish between
active or passive use. The plasma half-life for 9-carboxy THC
metabolite is estimated to range from 4-12 hours.

This test was developed and its performance characteristics
determined by ARUP Laboratories. It has not been cleared or
approved by the US Food and Drug Administration. This test was
performed in a CLIA certified laboratory and is intended for
clinical purposes.
