INTERPRETIVE INFORMATION: Drug Panel 7, Urn, Scrn w/Rflx to Conf

The absence of expected drug(s) and/or drug metabolite(s) may indicate non-compliance, inappropriate timing of specimen collection relative to drug administration, poor drug absorption, diluted/adulterated urine, or limitations of testing. The concentration at which the screening test can detect a drug or metabolite varies within a drug class. Specimens for which drugs or drug classes are detected by the screen are reflexed to a second, more specific technology (GC/MS and/or LC-MS/MS). The concentration value must be greater than or equal to the cutoff to be reported as positive. Interpretive questions should be directed to the laboratory.

For medical purposes only; not valid for forensic use.

Oxycodone results are reported with the opiates results. MDMA results are reported with the amphetamines results.

Cutoff: 20 ng/mL

Midazolam, Urn, Quant

46 ng/mL

Consistent with use of a drug containing midazolam, such as Versed.

Cutoff: 20 ng/mL

Alpha-hydroxymidazolam, Urn, Quant

2309 ng/mL

Midazolam metabolite: consistent with use of a drug containing midazolam, such as Versed.

Cutoff: 20 ng/mL

INTERPRETIVE INFORMATION: Benzodiazepines, Urine,  
Quantitative

Methodology: Quantitative Liquid Chromatography-Tandem Mass Spectrometry

For medical purposes only; not valid for forensic use.

Identification of specific drug(s) taken by specimen donor is problematic due to common metabolites, some of which are prescription drugs themselves. The absence of expected drug(s) and/or drug metabolite(s) may indicate non-compliance, inappropriate timing of specimen collection relative to drug administration, poor drug absorption, diluted/adulterated urine, or limitations of testing. The concentration value must be greater than or equal to the cutoff to be reported as positive. Interpretive questions should be directed to the laboratory.
