von Willebrand Factor Multimers

ARUP test code 0092281

von Willebrand Factor Multimers

See Note

von willebrand factor multimeric analysis shows a normal multimeric distribution.

Multimeric analysis is a qualitative test that cannot be used alone for the diagnosis or subtyping of von willebrand disease. This result should be correlated with quantitative results from vWF antigen, vWF ristocetin cofactor activity, factor VIII activity testing, and clinical information to exclude subtypes of von willebrand disease with a normal multimeric distribution. Additional information regarding diagnosis and subtyping of von willebrand disease is available at www.arupconsult.com.
