

Client: Example Client ABC123
123 Test Drive
Salt Lake City, UT 84108
UNITED STATES

Physician: Doctor, Example

Patient: Patient, Example

DOB: 11/11/2019
Gender: Male
Patient Identifiers: 01234567890ABCD, 012345
Visit Number (FIN): 01234567890ABCD
Collection Date: 01/01/2017 12:34

Drugs of Abuse Confirmation/Quantitation - Opiates - Meconium

ARUP test code 0092314

Drug Confirmation, Opiates, Meconium

Positive

Confirmed POSITIVE by LC-MS/MS for the following opiate(s):

Oxymorphone (free) = 32 ng/g

Methodology: LC-MS/MS

Drugs covered: 6-acetylmorphine (6-AM), morphine, codeine, hydrocodone, hydromorphone, oxycodone, and oxymorphone.

The presence of more than one opiate in meconium may reflect drug metabolism or use of multiple drugs. The absence of expected opiates may indicate non-compliance or limitations of the testing. Interpretive questions should be directed to the laboratory.

Oxymorphone may arise from oxymorphone-containing drugs or by metabolism of oxycodone.

INTERPRETIVE INFORMATION: Drug Confirmation,
Opiates, Meconium

Drugs Covered: codeine, morphine, 6-acetylmorphine, hydrocodone, hydromorphone, oxycodone and oxymorphone.
Positive cutoff: 20 ng/g

Meconium begins to form between the 12th and 16th week of gestation. Meconium drug testing can detect maternal drug use during the last 4 to 5 months of pregnancy. A negative result does not exclude the possibility that a mother used drugs during pregnancy. Detection of drug use depends on the quantity and quality of the specimen tested as well as the pattern and frequency of drug(s) used by mother. The concentration value must be greater than or equal to the cutoff to be reported as positive. Although not likely, the presence of drugs administered during labor and delivery may be detected in meconium. Interpretive questions should be directed to the laboratory.

For medical purposes only; not valid for forensic use.
