Dengue Fever Virus Antibody, IgM

ARUP test code 0093098

Dengue Fever Virus Antibody, IgM

4.62 IV H (Ref Interval: <=1.64)

INTERPRETIVE INFORMATION: Dengue Fever Virus Antibody, IgM

- 1.64 IV or less: Negative - No significant level of detectable dengue fever virus IgM antibody.
- 1.65 - 2.84 IV: Equivocal - Questionable presence of antibodies. Repeat testing in 10-14 days may be helpful.
- 2.85 IV or greater: Positive - IgM antibody to dengue fever virus detected, which may indicate a current or recent infection. However, low levels of IgM antibodies may occasionally persist for more than 12 months post-infection.

The best evidence for current infection is a significant change on two appropriately-timed specimens, where both tests are done in the same laboratory at the same time.
